

PEDIATRIC TRAUMA ADVANCED LIFE SUPPORT

1110

Advanced Life Support

1. Monitor vital signs, EKG, and Pulse Ox.
2. IV Normal Saline or LR, IO if patient is unstable.
 - A. If unstable, infuse 20 ml/kg and reassess.
 - B. If unstable, infuse maintain dose per pediatric drug chart.
3. Prevent heat loss.
4. Contact MCP for further orders.
5. Consider naso-gastric tube placement if no facial trauma.
6. Consider pain management per Pain Management Protocol.

Key Points/Considerations

Consider intubation and ventilation with 100% oxygen for pediatric coma scale scores less than 10, depending on transport time.
